

MOUSE IgG-HAMA BLOCKING REAGENTS

Is minimizing human anti-mouse antibody (HAMA) reactivity in immunoassay applications important to you? Our purified mouse IgG has been developed to help minimize immunoassay interference from HAMA reactivity. Diagnostic and pharmaceutical companies worldwide are successfully using these blocking reagents as a cost-effective solution to minimize interference.

Purified Mouse IgG - Catalog #A66186M

Greater than 95% purity	Reduced levels of contaminating serum proteins that could cause non-specific or other binding interference.
Extensive QC testing	Ensures a well-characterized product. Testing includes protein content, purity (determined by SDS-Page), isotype profile analysis, bioburden and more.
Lot-to-lot consistency	Extensive QC testing ensures a quality product every time and reduces the need for your assay reagents to adjust for variable performance of the blocking agent. Well-documented product history. Recognized for supplier excellence.
Large lot capability	Reserve large lots to lower your incoming QC costs. Product can be bought or reserved in kilogram sizes.
Species testing	Ensures that raw material is of mouse origin without contaminating species IgG of bovine, goat, human, rabbit, or rat origin.
Protein A level determination	Protein A contamination could interfere in your assay by binding antibody reagents.
Protease level testing	The presence of proteases can cause degradation of the mouse IgG or cause degradation of your assay reagents in your final reagent formulation.

To meet and exceed the product requirements of customer specifications and applications, we have developed multiple products which may be customized to the specific buffer, concentration, or QC requirements.

Protein A Purified Mouse IgG:

- A66186M (concentration range 9 - 13mg/mL)
- A66185M (concentration range 50 - 55mg/mL)

Additional Blocking Reagents:

- A66187M Mouse IgG (Caprylic Acid)
- Normal Animal Sera
- Purified Animal Immunoglobulins (Goat, Sheep, Rabbit, Rat, Mouse, Bovine)

Quality and Commitment:

- FDA registered facility
- QSR, Quality System Regulation Documentation
- Committed to total customer satisfaction

For Research or Further Manufacturing Use Only. Not for Use in Diagnostic Procedures.
