

Below is a brief summary of the reagents we offer for development of your ELISA, Western Blot, Latex Agglutination, IFA, Rapid Test and other assays.

Plate Coating Stabilizer and Blocking Buffer:

A comparison of 18 different antigens demonstrates superiority

- Plate Coating Stabilizer Catalog #J16430D
- Greatly increases the stability of solid phase proteins
- Maintains tertiary structure of proteins

For IgM Infectious Disease Assays - Goat anti-Human IgG (Fc):

Infectious disease assays for IgM antibodies typically use Catalog #L15406G material as a pre-treatment of human sera to minimize IgG and Rheumatoid factor (RF) complexes from interfering with the test results. Goats are housed in a USDA and AALAC Registered facility.

For Assays Utilizing Monoclonals or Needing a Blocking Agent:

- TRU Block™ Purified Mouse IgG, Goat IgG, Rabbit IgG, etc.
- Normal Animal Sera
- Custom formulations available

Conjugate Stabilizing Diluents:

- Conjugate Stabilizing Diluent-Alk Phos Catalog #J16600D
- Conjugate Stabilizing Diluent-HRP Catalog #J16200D

For specifications, bulk pricing, large lot availability, or samples, contact us.

Quality and Commitment:

- FDA registered facility
- QSR, Quality System Regulation Documentation
- Committed to total customer satisfaction

For Research or Further Manufacturing Use Only. Not for Use in Diagnostic Procedures.
